

# VACCINATED CLOSE CONTACT TO A COVID POSITIVE PERSON

Close Contact is **VACCINATED** and has **NO** symptoms

No test is required but it **is** recommended. Person should test on Day 5-7 after date of last exposure. Day of exposure = Day 0. Wear a mask until Day 14 or negative results are known.

If test result is **NEGATIVE**:

No quarantine. Monitor for symptoms and wear a mask in public until Day 14. If you develop symptoms, begin isolation for 10 days from the start of symptoms.

If test result is **POSITIVE**:

Begin isolation. Isolation period is 10 days from date of exposure, or the date of the test collection if you do not know the date you were exposed. When isolation period is complete, you may return to work/school if you have not had a fever for 24 hours from your last day of isolation and overall, **your symptoms are improving**. Continue to monitor for symptoms from Day 11-14 and wear a mask in public.

Close Contact is **VACCINATED** and has symptoms

Begin isolation. Test as soon as possible.

If test result is **NEGATIVE**:

Your symptoms may be due to a different illness. Contact your doctor for an alternative diagnosis

Or

Return to work/school when your symptoms are improving.

If your test result is **POSITIVE**:

Continue to isolate. Isolation period is 10 days from date your symptoms began or the date you were tested, whichever came first. When isolation period is complete, you may return to work/school if you do not have a fever for 24 hours from the last day of isolation and overall, your symptoms are improving. Continue to monitor for symptoms from Day 11-14 and wear a mask in public.

**DEFINITIONS: ISOLATION:** Separates infected and contagious people from people who are NOT ill.

**QUARANTINE:** Separates and restricts movement of a person who has been exposed, but not actively ill.
